moniter.py

Requirements

1. python
   https://www.python.org/downloads/
2. yagmail
   `pip install yagmail`

Usage

1. Open CLI of choice
2. Enter the following line: `python moniter.py [--interval number]`, eg `python moniter.py --interval 60`
3. `--interval` is an optional parameter that specifies how often the script will check unit online status, units is minutes.
4. On first run a configuration file `tracking.json` will be created.
5. `tracking.json` is used to specify which units to query and which email to send the email to.
